Introduction

Valve supplier to the world

Flowserve is the driving force in the global industrial valve marketplace. No other valve company in the world has such a long proven expertise in the successful application of engineered special purpose valve and valve systems.

Flow control solutions

Flowserve is providing valve solutions which permit customers to continuously improve productivity, profitability and valve reliability.

Market focused customer support

Product and Industry specialists develop effective proposals and solutions directed toward market and customer preferences. They offer technical advice and assistance throughout each stage of the product life cycle, beginning with the inquiry.

Dynamic Technologies

Flowserve is spending without any doubt a lot of efforts in development and application of valve technology, including: Manufacturing technology materials, metal & non metals science.

Flowserve Ahaus History

- 1964** Established in Ahaus, NRW, Germany as Atomac KG. Manufacturing of special PTFE parts such as bellows, seals, cup&cone packing, plugs as well radial shaft packings.
- 1970** Commissioning of the first injection moulding machine.
- 1974** Extension and upgrading production, development of FEP lined ball valves, 3 piece design, sizes DN25-100.
- 1975** Extension and upgrading of the production with PTFE lined products such as pipes, elbows, tees and dip pipes.
- 1977** Further extension of the production and development of glass pipe valves and vessels, mixing vessels and accessories as well the manufacturing of inclined seat valves.
- 1982** Acquisition of Atomac by the US company Posi Seal Incorporated. Further developments of Atomac products. Manufacturing of high performance butterfly valves. Discontinued production of lined piping & fittings. Concentration on manufacturing of lined valves.
- 1983** The inauguration of the new administration and production buildings.
- 1985** Acquisition of Posi Seal by the Fisher Controls Incorporated. Continuation of the developments and the extension of the Atomac product program and production of Fisher control valves and transmitters.
- 1988** Acquisition of Atomac by The Duriron Company Incorporated Dayton, Ohio.
- 1990** Launch of the AKH2.2 lined ball valve with a metal to metal middle flange connection (Patent No. EP 0 645 565 BL) providing a maintenance free lined ball valve.
- 1996** Transfer of the plug valve & butterfly valve production from the Petit-Rechain plant in Belgium to the Ahaus facilities..
- 1997** Merger of Duriron with BW/IP; Creation of Flowserve Corporation.
- 1998** Change of company name to: **Flowserve Ahaus GmbH**

Atomac valves can be applied to duties within the below illustrated graphs. These graphs are based on our experience in engineering and production of lined valves and accessories for more than 30 years. For applications outside these graphs, please consult with Flowserve Ahaus.

Vacuum-Temperature-Diagram

Pressure-Temperature-Diagram

Operation parameter for other linings available on request

The production of the fluoropolymer liners is based on processes developed by Flowserve Ahaus on equipment and tools produced by ourselves, dedicated for our products. The process parameters are dedicated to each component to ensure stressfree moulding of the parts with utmost and reproduceable quality.

Typical properties of liner materials used for atomac products

Properties	PFA	PFA-conductive	FEP	PP	PVDF	Tefzel
Density	2,12-2,17 g/cm ³	2,12 g/cm ³	2,12-2,17 g/cm ³	0,912 g/cm ³	1,75-1,78 g/cm ³	1,7 g/cm ³
Tensile strength	min. 26,7 N/mm ²	22 N/mm ²	min. 20,7 N/mm ²	26 N/mm ²	38-50 N/mm ²	44,1 N/mm ²
Breakage elongation	min. 300 %	275 %	min. 250 %	11 %	20-250 %	200 %

Practical temperature range (depressurized state)	-270 / +260 °C	-200 / +260 °C	-270 / +205 °C	0 / +82 °C	-60 / +90 °C	-100 / +150 °C
Chemical resistance	excellent	excellent	excellent	good	good	very good

Ductile cast iron per ASTM A395 and DIN EN 1563 GGG40.3 is used as the standard material for the body casting. For applications beyond the acceptance of ductile cast iron we can offer cast stainless steel per ASTM A351 Gr. CF8M and DIN material 1.4408 as an alternative for the atomac product range.

Specification of Ductile Iron EN-GJS-400-18U-LT (GGG-40.3), ASTM A395

Tensile Strength	400 to 450	N/mm ²
0,2% Offset Yield Strength	240 to 300	N/mm ²
Breakage Elongation	18	%
Brinell Hardness HB 30	120 to 165	
Notched Bar Impact Work at -20°C (ISO-V)	12	J
Density	7,1 to 7,3	kg/dm ³
Intermediate Linear Coefficient Thermal Expansion 20 to 500°C	10 to 13	(1/K) multiplied by 10 ⁻⁵
Thermal Conductivity 20 to 400°C	0,42 to 0,25	W/(cm multiplied by K)
Specific Heat Capacity 20 to 100°C	0,54 to 0,71	J/(g multiplied by K)
Working Temperature	-10 to 350°C	AD-W3/2
Load II	-60	AD-W10
Service Pressure max.	10 bar	

Specification of Stainless Steel 1.4408, ASTM A351 Gr. CF8M

Tensile Strength	440 to 640	N/mm ²
0,2% Offset Yield Strength	185	N/mm ²
Breakage Elongation	30	%
Brinell Hardness HB 30	130 to 200	
Notched Bar Impact Work at -20°C (ISO-V)	60	J
Density bei ~ 20°C	7,9	kg/dm ³
Intermediate Linear Coefficient Thermal Expansion 20 to 500°C	15,8 - 17,7	(1/K) multiplied by 10 ⁻⁵
Thermal Conductivity bei ~ 50°C	14,5	W/(cm multiplied by K)
Specific Heat Capacity bei ~ 20°C	530	J/(kg multiplied by K)
Working Temperature	-200 to 500°C	

Overview of Flowserve Ahaus Products

Since 1964 a large variety of components and products are made from, or lined with Teflon® and other fluoropolymers in Ahaus. The initial design of a 3-piece DIN ball valve was continuously re-designed and extended to meet all requirements within the global process industries. Today Flowserve Ahaus offers a large range and a vast variety of valves including ball valves, butterfly valves, plug valves besides a range of complimentary products such as strainers, sight glasses, various check valve designs and sampling valves. Below is a summary of the standard portfolio available from Flowserve Ahaus. For extensions or modifications of the standard portfolio, please consult with Flowserve Ahaus.

Valve Type	Valve Model	Description		Face to Face	Flanges	Size Range	Remarks
ball valve	atomac AKH2	2-piece fully lined ball valve with full port	DIN	DIN EN 558	DIN EN 1092-2, PN16; DN 200, DN 250, DN 300: DIN EN 1092-2, PN10	15 - 350 mm	DN200 and larger to ANSI face to face
			ANSI	manufacturer standard	ANSI B 16.5, 150lbs	½" - 14"	
ball valve	atomac AKH2.2	2-piece fully lined ball valve with full port	DIN	DIN EN 558	DIN EN 1092-2, PN16	15 - 100 mm	maintenance free,
			ANSI	manufacturer standard	ANSI B 16.5, 150lbs	½" - 4"	maintenance free,
ball valve	atomac AKH2A	2-piece fully lined ball valve with full port	ANSI	ISO 5752 tab. 6, short ANSI B 16.10, short (col. 19)	ANSI B 16.5, 150lbs	1" - 6"	short pattern, full port
ball valve	atomac AKH3	2-piece lined ball valve	ANSI	ISO 5752 tab. 6, short ANSI B 16.10, short (col. 19)	ANSI B 16.5, 150lbs	1" - 14"	short pattern, reduced port
ball valve	atomac AKH5	2-piece fully lined ball valve with full port	DIN	DIN EN 558	DIN EN 1092-2, PN16	25 - 150 mm	fully ceramic lined

			DIN		DIN lug butterfly	50 - 600 mm	long pattern face to face
			ANSI		ANSI lug butterfly	2" - 24"	long pattern face to face

AKH2 Lined Ball Valve*

A two piece full port standard lined ball valve which offers high safety factors, high stability, rigidity and eliminates a potential leak path. The full port design minimizes pressure losses and increases flow capacities thus reducing energy and pumping costs.

Atomac lined ball valves are engineered to include a free floating ball design which offers the following benefits:

- Low frictional coefficients resulting in low operating torques
- Positive shut - off across the pressure range
- Reduction of stem side loads eliminating potential leaks to atmosphere through the valve gland.

A real anti blow-out stem design offers increased safety. Each lined ball valve has its anti-static device, which provides

protection against potentially dangerous electrostatic discharges.

Long life seats, large stem sealing area as well as the substantial middle flanges and the molded liner take care for a leak and trouble free valve and minimizes downtime and maintenance.

Due to the actuator mounting flanges design according to DIN EN ISO 5211, pneumatic, electric or hydraulic actuators can easily be fitted.

A wide range of liner material can be selected from FEP, PFA, Tefzel, PP, PVDF as well as conductive PFA.

** Also available with a V-port ball for precise modulating control service or with C-ball available.*

AKH2

AKH2.2 Lined Ball Valve*

The Atomac full port AKH2.2 lined ball valve has the same characteristics as the AKH2 however the AKH2.2 offers enhanced features to improve suitability for toxic and corrosive applications.

The AKH2.2 design features a static and dynamic middle flange seal and in comparison with the AKH2 the metal-to-metal body joint which protects this seal.

The metal-to-metal body joint absorbs destructive pipe vibrations and distortions so that there will be no negative effects on the sealing performance. Thermal cycling does not require retightening of the bolts anymore.

The packing is constantly preloaded through a set of belleville washers retained within a top cap. The packing is maintenance free and meets environmental standards such as TA Luft. The top cap also provides the actuator mounting platform per ISO 5211.

Seats have a larger diameter and therefore create less flow turbulences across the seat area and the integral retention lip cares for extra seat stability.

* Also available with FEP, PFA, Tefzel, PP, PVDF and PFA-conductive liner materials as well with a V-ball for precise modulating control service or with C-ball available.

AKH2.2 with ceramic ball

AKH2.2 PFA-conductive lined

AKH2.2

AKH3, AKH2A

AKH3

AKH3

The AKH3 is an ANSI B16.10 short pattern, 150 lbs., reduced port, lined ball valve with a minimum cavity space. The floating ball design ensures bubble-tight shut-off across the pressure range of 1 mbar to 19 bar. Long term protection against external leakage to atmosphere is provided by PTFE chevron packing rings in a deep stuffing box, the substantial body flanges and the moulded liner seal. An anti static device provides protection against potentially dangerous electrostatic discharge and the anti blow-out safety stem design eliminates the possibility of a blow-out.

Also available as V-port ball valve for precise modulating control services and various liner materials incl. conductive PFA.

AKH2A

The AKH2A is an ANSI B 16.10 short pattern full port lined ball valve. This valve has the same characteristics as the AKH2 however, at reduced space and weight. The AKH2A is available with FEP and PFA liners as standard – other lining materials on request.

AKH2A

AKH5, AKH6, AKH7

AKH5 Magnesia Partially Stabilized Zirconia (Mg PSZ) Ceramic Lined Ball Valve*

Due to advanced ceramic technology, the AKH5 achieves an unequalled performance that offers the ideal solution for many difficult applications in which erosion, wear, abrasion, impact, corrosion and high temperature cause conventional materials to fail.

Furthermore the design of the AKH5 offers minimum cavity space that reduces the retention of line media within the body cavity so therefore product contamination problems are significantly reduced.

The Mg-PSZ Zirconia Ceramic material offers :

Wear Resistance:

Abrasive slurries have little effect on its rock hard surfaces.

Corrosion Resistance:

It is virtually inert to acid bases and most other corrosives.

Impact Resistance:

The composition of the materials and the advanced process technology result in high mechanical strength and toughness.

Temperature Resistance:

High operating temperatures and thermal shock are not a problem. The melting point of Mg-PSZ ceramic is well beyond the valve limits of 350°C. Higher ratings on request.

Cavitation Resistance:

Cavitation related problems are sharply reduced due to the extreme hardness of the ceramic material (Rockwell 89)

Unequalled Benefits:

The Mg-PSZ ceramics have consistently outperformed steels, cobalt,

nickel alloys and other ceramics in a wide range of severe applications such as, steam services, abrasive slurries, fly ash, high temperature corrosives and sand abrasion are only a few of the many conditions where the AKH5 Mg-PSZ lined ball valve has solved serious problems.

** Also available as V-port ball valve for precise modulating control service*

AKH6 Lined Tank Drain Valve

The AKH6 is originally designed to serve as tank drain valve, but it also can be installed in place of reducing spools to downsize piping dimensions.

There is a wide range of various dimensions available with flange connections per DIN PN16 as well ANSI 150Lbs.

Furthermore the AKH6 has the same characteristics as former mentioned lined ball valves included high corrosion resistant liners either FEP or PFA, full ports, anti blow-out stem, anti-static design, actuator mounting flanges according DIN EN ISO 5211 and a long term protection against external leakage to the atmosphere. All internal components and spare parts are interchangeable with the components of the atomac ball valve AKH2.

AKH7 Lined Ball Valve For Glass Pipe Systems

Designed for easy installation in glass pipe systems with socket/ball or plane ends according to DIN EN 12585 and for the flange/glass end connections the AKH7 KPF is available.

The AKH7 offers high corrosion resistant liners made of either FEP or PFA (others on request) anti-static design, ant blow-out stem and long term protection against external leakage to the atmosphere.

AMP3 3-Way Lined Ball Valves*

The AMP3, 3-way ball valve is the best choice for corrosive diverter valve applications and available at lower cost than alloy valves with equal or superior corrosion resistance in difficult services.

The compact design permits use where space constraints are a concern.

The 3-way ball valve design offers a high flow capacity with minimal pressure loss through the valve.

The AMP3 is available with an L-ball or T-ball configuration to offer a wide variety of flow patterns for 90° or 180° rotations.

* Optional PFA-conductive liner material

AtoStar

Stainless Steel PFA Lined Ball Valve

The AtoStar stainless steel, fluorocopolymer lined ball valves deliver improved performance, reliability and safety.

AtoStar full port valves provide bubble tight shutoff, low maintenance, No-leak stem seals and the safety assurance of a blowout-proof stem assembly. AtoStar ball valves meet ASME, DIN and JIS standards.

AtoStars are very suitable for use in the pharmaceutical and semiconductor industries but also recommended for the following cases;

- a) At frequent solvent and chemical cleaning services.
- b) In highly corrosive atmospheres.
- c) At service temperatures below DCI rating > - 60°C (-76°F).

d) For offshore applications.

AtoStars are also available as a V-port valve for precise modulating control services, or can be fitted with a C-ball for internal cavity cleaning purposes.

The AtoStar spare parts are interchangeable with the balance of the lined Atomac ball valve range.

The AtoStar ball valve range consists of 6 models:

AS1 with Face-to-Face dimensions per DIN EN 558-1 (as our AKH2), AKH2.2 - DIN version) flanged per DIN PN16

AS2 with Face-to-Face dimensions per ANSI (as our AKH2 and AKH2.2 - ANSI version), flanged per ANSI B 16.5 class 150

AS3 with Face-to-Face dimensions per ANSI B 16.10 (as our AKH3 and AKH2A), flanged per ANSI B 16.5 class 150

AS4 with Face-to-Face dimensions per ANSI B 16.10 - short pattern (as our AKH3 and AKH2A), flanged per JIS 10 K

AS5 with Face-to-Face dimensions per Japanese Industrial Standard, flanged per JIS 10 K

AS6 AtoStar with integral heating jacket for critical applications

AtoStar 1-5

AtoStar 6

AKH2-300

Lined Ball Valve

The ANSI class 300 AKH2 ball valve series was primarily designed to suit pressure requirements of the chlorine and related industries. Although most applications are within ANSI class 150, the piping requirements often need to meet ANSI class 300 for enhanced safety purposes. The AKH2-300 meets pressure requirements, Face-to-Face and flange dimensions as well as wall thickness per ANSI class 300 while offering the same design features and benefits as the standard AKH2 ball valve series, such as 2-piece design, full port and free floating ball assembly associated with positive retention of the liner within the valve components. All internal components and spare parts are fully interchangeable within the atomac AKH2 ball valve range. Please contact Flowserve in Ahaus for detailed pressure / temperature capabilities of this product range.

AKH2-300

AtoPro Stainless Steel and Lined Ball Sampling Systems

The AtoPro sampling ball valve systems are developed and produced with the latest technology and offer you a wide scale of sampling possibilities, this can go from just a simple quick sampling up to sampling protected by a stainless steel case or high security sampling with a stainless steel protecting case in combination with integrated detoxification filters to protect the environment.

Bottle adaptors can be made to meet almost all common standard threads, heating jackets as well angled connection pieces are available.

Due to the use of stainless steel bodies as well PFA* lined stainless steel bodies both designs can be suitable for "clean room" services.

** Option PFA-conductive.*

AtoPro PFA lined

*AtoPro
PFA-conductive*

*AtoPro PFA or PFA-conductive lined with
protecting casing and actuator*

AtoPro stainless steel

Contact your nearest Flowserve sales office for separate documentation.

ARK2, ARV2 Check Valve

ARK2 Swing Check Valve

The fully PFA lined atomac swing check valves are ideal for use in highly corrosive applications and can replace swing check valves made from exotic alloys due to the universal chemical resistance of the fluoropolymer lining. These valves can be used in horizontal and vertical installations due to the special design of the hinge pin, which enables the disc to achieve a seal without support of any system pressure.

The ARK2 eliminates a potential leak path of conventional 3-piece and 2-piece designs with a seat face integrated in the body liner to seal against the disc in the closed position. The disc can swing freely within piping system without interference with the diameter of the connecting pipe.

ARK2

ARV2 Lined Ball Check Valve*

This two piece body designed check valve provides high stability, rigidity and eliminates potential leak path and can be installed either vertically and dependent upon application horizontally as well. Ball material consists of solid PTFE. Liner materials such as FEP, PFA and conductive PFA have outstanding corrosion resistant properties.

The ARV2 can be considered as a full port design which offers excellent flow characteristics. Low opening pressure is needed to unseat the ball in then vertical position.

* Optional PTFE hollow ball/spring supported/PFA-conductive

ARV2

ARL, ARV/SG Check Valves

ARL

ARL Lined 45° Ball Check Valve

This ball check valve can be installed either vertically or horizontally and offers an unobstructed flow due to the fact that the ball is pushed into the 45° cavity.

For applications where high medium flow turbulences can be expected, installation of an ARL check valve can be the ideal solution to avoid liner damages, as well as for use in horizontal pipes with low flow and low back-pressures.

ARV/SG Lined Check/ Sight Glass Combination

The ARV/SG is a sight glass with an integrated check valve for use in both vertical and horizontal installations. This combination of two products saves space and allows the performance of the check valve to be monitored visually. Borosilicate glass, in accordance with DIN 7080, is incorporated to withstand the high temperatures, mechanical stress and corrosion resistance required by end users.

ARV/SG

ASG, ASG3, ASG4, ASF Sight Glasses & Strainer

ASG Lined Sight Glass

The Atomac sight glass offers clear visual inspection from either side. The integrated drip lip with its cast core provide visual flow indication even at low velocity (optional rotor). Borosilicate glass, in accordance with DIN 7080, is utilized to withstand high temperatures, mechanical stress and corrosion. All internal components other than the glass have highly corrosion resistant liners. These are made of either FEP or PFA*, depending upon application and offer both a long service life.

* Optional PFA-conductive liner material

ASG3 sight glass

ASG-B

ASG

ASG3 Lined 3-Way Sight Glass*

The Atomac 3-Way Sight Glass offers clear visual inspection from either side, highly corrosion resistant liners cover all internal parts and borosilicate glass, in accordance with DIN 7080 is utilized to withstand high temperatures, mechanical stress and corrosion.

* Optional PFA-conductive liner material

ASG4 Lined 4-Way Sight Glass*

The ASG4 sight glass offers clear visual inspection from either side, highly corrosion resistant liners cover all internal parts and borosilicate glass, in accordance with DIN 7080 is utilized to withstand high temperatures, mechanical stress and corrosion.

* Optional PFA-conductive liner material

ASG4 Schauglas

ASF strainer

ASF Lined Strainer

The flow path through the filter insert is a larger area than the original pipe cross-section to minimize possible pressure loss. The corrosion resistant filter insert consists of two perforated PTFE cylinders with an ETFE filter screen in between which offers the same outstanding corrosion resistant properties as the lining material FEP or PFA*. Clogged filter inserts can be easily exchanged or cleaned without removing the strainer from the line. For added operator safety, the residual fluid in the insert area can be removed by means of a PTFE drain plug prior to removing the access flange when changing or cleaning the filter. Various mesh sizes of filter screens or drillings are available to accommodate different levels of contamination. Permanent drain connections are available as an option.

* Optional PFA-conductive liner material

> For options and sizes/technical info see page 20 & 38-40

BTV Lined Butterfly Valves

BTV PFA lined

Thanks to advanced technology we can state firmly that the BTV butterfly valves keep chemical fluids in your process piping and out of the environment.

A self adjusting triple stem seal system assures No leakage to the atmosphere. Viton seat energizer and concave PTFE* liner design provide dependable consistent shutoff and closure torque.

Spherical seat design of the disc and liner provides a 360° seal for long service life. The viton energizer is isolated and protected in a machined groove of the valve body. The concave designed liner is recessed into the valve body and this reduces the possibility of torn liners due to cold flow into the valve waterway.

** Optional available UHMWP and Durlon II and PFA-conductive liner materials*

BTV PFA-conductive lined

BTV 2000 / BTV 2000 LP Lined Butterfly Valves

The BTV 2000 lined butterfly valve series are maintenance free thanks to its live loaded triple seal stem design and assures bubble tight shutoff for a long service life. In addition the BTV 2000 series offer a wide choice of materials for the toughest service conditions. For example there is a rigid machined PTFE liner for severely corrosive chemical services or UHMWPE for tough corrosion-/erosion area applications or PTFE-conductive where high velocity fluids are a part of the production process or installation in explosion proof areas of your industry. A one-piece PFA encapsulated disc is standard for chemical services. An UHMWPE encapsulated disc may be specified when improved abrasion resistance is needed. A wide variety of optional metallic discs are available ranging from 316 stainless steel, Durimet 20 and SMO* to Monel**, Chlorimet 2 & 3 and Palladium stabilized Titanium.

* Registered trademark of Avesta AB

** Registered trademark of the Int. Nickel Company

BTL

BTW

BTV 2000 LP (Long Pattern, Face-to-Face)

BTV 2000 LP offers the same properties as the standard BTV series however instead of a short pattern body it has a long pattern body. The extended Face-to-Face eliminates the potential for the disc to interface with heavy duty lined piping systems. Face-to-Face on BTV 2000 LP is DIN-EN 558-2 col 16. All parts of the BTV and BTV-LP are interchangeable with the exception of the body and liner.

For more info or separate documentation please contact Flowserve Ahaus GmbH or your nearest Flowserve sales office.

T4E Lined Plug Valve

T4E with additional metal
diaphragm

The T4E series is designed and developed with the latest technology and therefore very suitable for the chemical process industries and available in the ANSI Class 150 & 300 as well DIN Class PN16 and a max. temperature of 204°C. The T4E lined plug valves provide maximum corrosion resistance and the elimination of product contamination at reasonable costs.

PFA body liner is well anchored against the body by means of machined and cast T-slots and the solid encapsulated/anchored PFA-plug liner material ensures a strong adhesion. This makes the T4E series so suitable for extreme service and vacuum conditions.

A large sealing surface guarantees a bubble-tight shut-off.

A secondary dynamic self adjusting, self-energized PFA* reverse lip diaphragm prevents stem leakage.

You never replace valve seats; you only reseal the plug with a quick and easy in-line adjustment.

Standard material of construction is Ductile Cast Iron, however, stainless steel valve bodies can be made available upon request.

** Optional stainless steel diaphragm support.*

ET4E Lined Control Plug Valve

In addition to the features and benefits that have made Plug Valves the process industry's premier isolation valve, Flowserve offers the ET4E V-port valve for precise modulating control services.

ET4E V-port control valves are available in a variety of trim configurations to satisfy your exact flow control needs.

Sizes include DN1" / DN25 through DN4" / DN100 with full open Cv values of 0,8 to 187.

Overview of Opt

Options available on Atomac Products

Lined C-balls will help to eliminate media build-up in ball cavity.

Lined characterized V-port balls for control/throttling applications. For AKH5 available in Mg-PSZ ceramic.

AtoPro system with heating jacket and stainless steel protecting case in combination with integrated detoxification filters.

Lockable hand levers and extensions are available for all atomac lined ball valves.

ASF Strainers with flange and drain valve.

Cavity flush
A custom request successfully designed for the pharmaceutical industry to flush the cavity to avoid product build-up.

AS6 with heating jacket. recommended for suitable "clean room" applications.

Extended Packing for AKH2, AKH2A, AKH3, AtoStar with double stuffing box. Also available with lantern ring to monitor gland seal.

Seat rings

Will be available for all atomac lined ball valves, in the following materials, glass-fiber reinforced PTFE, PFA – conductive. Other materials on request.

ion Choices

Options available on Durco Products

V-port PFA lined characterized plugs for modulating applications are available for various sizes of the T4E lined plug valves.

T-wrench stem extensions are available for T4E lined plug valves up till DN80/3".

Vented plugs for chlorine applications. PFA lined plug with side hole or bottom vent is available for the T4E lined plug valves.

Liner BTV for the BTV 2000 lined butterfly valves the following liner materials are available; Sentinel liner/Durlon superior permeation resistant material UHMWPE, PFA-conductive.

Discs availability
UHMWPE lined,
PFA-conductive lined,
Alloy: 316, Durimet 20, 254 SMO*,
Monel**, Chlorimet 2&3, Palladium stabilized Titanium.

body alloy BTV series instead of DCI also available in 316 stainless steel.

* Registered trademark of Avesta AB

** Registered trademark of the Int. Nickel Company

T4E PFA lined plug valves as well lined plug inserts can be made available in 316 stainless steel.

BTV available as standard/ DIN EN 558, col. 20 as well long pattern design DIN EN 558, col. 16 long pattern.

Automation

Manual and Automated Operations

Atomac and Durco lined valve are equipped with a lever as a standard operator for the following size range:

- Atomac ball valves up to 10" (DN 250) full port and 12" (DN 300) reduced port
- Durco T4E plug valves up to 4" (DN 100)
- Durco BTV butterfly valves up to 8" (DN 200).

All larger valve are equipped with a manual gear. Changes can be made on request. The modular construction of lined atomac as well Durco valves allows for easy use of all types of pneumatic or electric actuation systems. Due to the ISO 5211 universal mounting pad, actuators can be mounted to the valves on-site, without removing them from the pipeline.

Automation

Valve Automation

Flowserve offers a range of pneumatic and electric actuators from prime brands within its own portfolio. Actuators are of rack and pinion design as well as scotch yoke design to cover the torque requirements of the Flowserve Ahaus valve portfolio. Besides actuators Flowserve also offers a range of accessories such as limit switches and positioners, also with digital communication capabilities. These automation components complement our range of valves.

If required, Flowserve also offers assembly and test of non-Flowserve actuator and accessories.

Sizing of Actuator

Torque data to help sizing of actuators are available from Flowserve Ahaus GmbH, or your nearest Sales office.

Application Examples for Lined Atomac and Durco Valve Products

Although it is known that Flowserve Atomac and Durco are leaders in the design and manufacture of corrosion resistant fluoropolymer lined valves and that these valves are used in the toughest fluids of the CPI, we like to indicate a few application examples for your convenience.

Pulp & Paper Industries

Atomac lined products for:

Spent acid, tall oil, sodium chlorate, sulphuric acid, HCL, chlorine dioxide and sodium hypochlorite

Atomac ceramic lined for:

All type of strong abrasive slurries & high temperatures

Durco BTV's / SMO* disc:

Bleach Filtrate

* SMO registered trademark of Avesta AB

Steel Industry

Durco lined plugvalve T4E:

Steam service / Hydrogen sulfide scrubber

Durco BTW 480:

CO₂, HCN, CS₂ / Amonia scrubber

Durco BTW 480 / PFA:

Sulfuric Pickle Line

Atomac PFA lined valves:

Pickling Line

Titanium Dioxide Production (both sulphate and chloride)

Atomac lined products for:

Chlorine, liquid and vapour, sulphuric acid, barium Chloride, calcium chlorides, HCL

Atomac ceramic lined for:

Titanium Tetrachloride, Titanium dioxide slurries

Durco BUW 400/490:

Caustic, 20% Titanium dioxide slurries.

Durco T4E lined plugvalve:

Sulfuric acid, HCL, chlorine, liquid & vapour

Pharmaceutical Industry

Durco PFA* lined plugvalves T4E series:

Suspensions containing solids

Durco PTFE lined butterfly valve with PFA or alloy disc:

Powder applications

Atomac lined products**:

Solvents, acids, alkaline and mixtures of these

* All liner materials are FDA approved

** A very recommendable valve is for example the stainless steel fully lined PFA Atostar ball valve

FCD ATETB001-05 Printed in Germany. September 2011
