Bubble-tight shutoff with low torque

The Valtek TX3 triple offset butterfly valve from Flowserve offers excellent shutoff capabilities, with the low torque and reduced wear benefits of a triple offset design. The laminated seal ring, in conjunction with the triple offset geometry, results in a design that can provide bi-directional, bubble-tight shutoff.

About triple offset butterfly valve technology

Valtek TX3 triple offset butterfly valves feature a special sealing mechanism, comprised of contacts of an inclined and conical body seat with laminated seal ring. As a result, the friction and abrasion between the sealing elements (i.e., seal ring and body seat) are eliminated. The unique feature of this design is that it provides low torque, broad sealing and tight shutoff.

Single offset

The rotation axis of the disc is moved back from the sealing surfaces of the body seat. The purpose of this offset is to have a continuous sealing surface on the seal ring and body seat.

Double offset

The rotation axis of the disc is moved away from the center line of the valve body. The purpose of this offset is to lift the disc and seal ring quickly off and away from the body seat while decreasing the friction during operation.

Triple offset

The virtual conic axis, extended from the sealing surfaces of the body seat, is inclined from the rotation axis of the disc. The purpose of this offset is to eliminate friction, galling and wear generated at the sealing surface during operation and provide bubble-tight shutoff on high pressure and temperature.

Specifications

The Valtek TX3 triple offset butterfly valve meets a number of industry standards for performance:

Product specifications

Design Standards	ASME B16.34, API 609
Sizes	NPS 3 to 60
Pressure Classes	ANSI class 150, 300, 600, 900, 1500
End Connections	Lugged, wafer, double flanged (long and short), butt-weld (cryogenic)
Face-to-face	API 609 (lug and wafer), B16.10 (long pattern), API 609 and ISO 5752 (short pattern)
Operating Temperature	Standard: -50°C to 427°C (-58°F to 800°F) High temperature to 820°C (1,500°F) Cryogenic: to -196°C (-320°F)
Leakage Rates	API 598 and ISO 5208
Fire Safety	API 607, ISO 10497
Fugitive Emissions	ISO 15848

Features and benefits

- Triple offset design — eliminates wear associated with sealing surface contact and maintains sealing integrity during high cycle
- Laminated graphite or metal-to-metal sealing provides robust performance in a wide range of harsh and difficult services
- Robust, anti-blowout shaft meets requirements of API 609
- Bi-directional, tight shutoff
- Low-operating torque for compact, cost-effective actuation
- Meets industry standards for design, fire safety and fugitive emissions

® Hastelloy is a registered trademark of Haynes International.
® Inconel is a registered trademark of the International Nickel Co., Inc.
® Monel is a registered trademark of International Nickel Co.

Sealing system

Valtek TX3 triple offset valves operate using a camming action, which reduces the possibility of galling or scratching on the sealing surfaces between the sealing elements (i.e., disc and seat). It also reduces the possibility of jamming between the sealing elements, which can happen with valves that rely on single-point sealing.

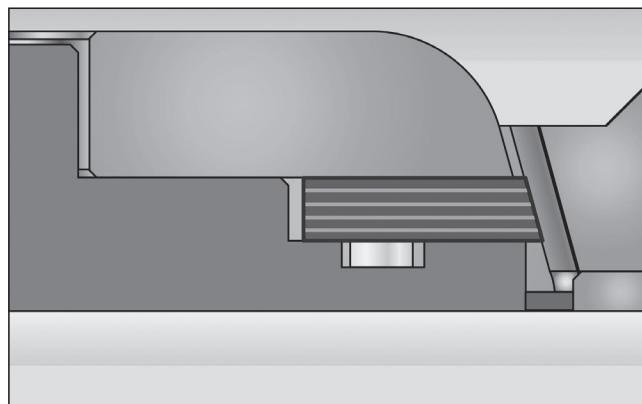

The sealing surfaces of the Valtek TX3 valve disc have different angles in all points. The Valtek TX3 valve has an elliptical sealing system. The sealing surfaces of an elliptical sealing system are completely in contact at the final position only, and upon opening, all contact points are released immediately from the seat ring. This mechanism provides bubble-tight shutoff.

The Valtek TX3 triple offset butterfly valve is a torque-seated valve, utilizing the torque provided by the operator to create a seal, rather than by positioning of the disc. This provides a robust, positive means for shutoff, particularly for high-pressure and/or high-temperature applications.

Laminated seal ring

The laminated seal ring is composed of alternating layers of metal and graphite. The laminated seal ring of a Valtek TX3 valve provides bubble-tight shutoff, even in gas applications. Each individual layer performs an independent sealing and is unaffected by the damages to other layers. The elements of the laminated metal plate can be offered with various metals, including 316SS, duplex, Inconel®, Monel® and Hastelloy®, depending on the application.

Additionally, for high-temperature and more severe applications, a solid metal seal ring is available. The solid metal seal ring is also used for cryogenic applications.

Packing and bearings

The Valtek TX3 butterfly valve uses proven packing designs to provide trouble-free stem seal performance for a variety of applications. Material options include PTFE for optimum leakage control, while graphite provides fire-safe protection. Options include single and double packing sets, purge ports and spring loading for high-cycle or high-temperature swing services.

A robust bearing design provides solid shaft support to maximize service life and control valve performance. Materials are offered to provide corrosion resistance in a variety of harsh chemical services.

Bearings

Bearing Material	Recommended Shaft Materials
316 SS Nitrided	410 SS, XM-19 (Nitronic 50), 17-4PH, Monel, Inconel, F6a Class 4
Alloy 6, 316 Alloy 6	410 SS, XM-19 (Nitronic 50), Inconel, Monel, F6a Class 4

The standard 316 SS bearing with Nitride treatment is compatible with all shaft materials and will work acceptably in most applications. For special applications where a customer's application or specifications demand a more durable bearing, a solid Alloy 6 or Alloy 6-overlaid 316 SS bearing is available.

Note: Valves with shaft diameters 38.1 mm (1.5 in.) or smaller must use a solid Alloy 6 bearing; overlay is not possible on these sizes of bearings.

End connections, flanges and bolting

The Valtek TX3 butterfly control valve is offered in several standard end connections to meet a variety of industry standards and customer applications. Lug, wafer and double-flanged styles are offered as standard. Face to face dimensions for all styles will meet the API 609 standard.

Packing options

Packing System	Packing Description	Maximum Pressure		Max. Temp		Options Availability	Certification
		psi	bar	°C	°F		
Graphite Rib-Braided	Braided Graphite rings	4,400	300	-196 to 650	-320 to 1200	Single/Twin/ Live Loading	API 607
Braided PTFE	Virgin braided PTFE	4,000	276	-100 to 204	-148 to 400	Single/Twin/ Live Loading	-

Note: Cryogenic stem extension required for temperatures below -51°C (-60°F).

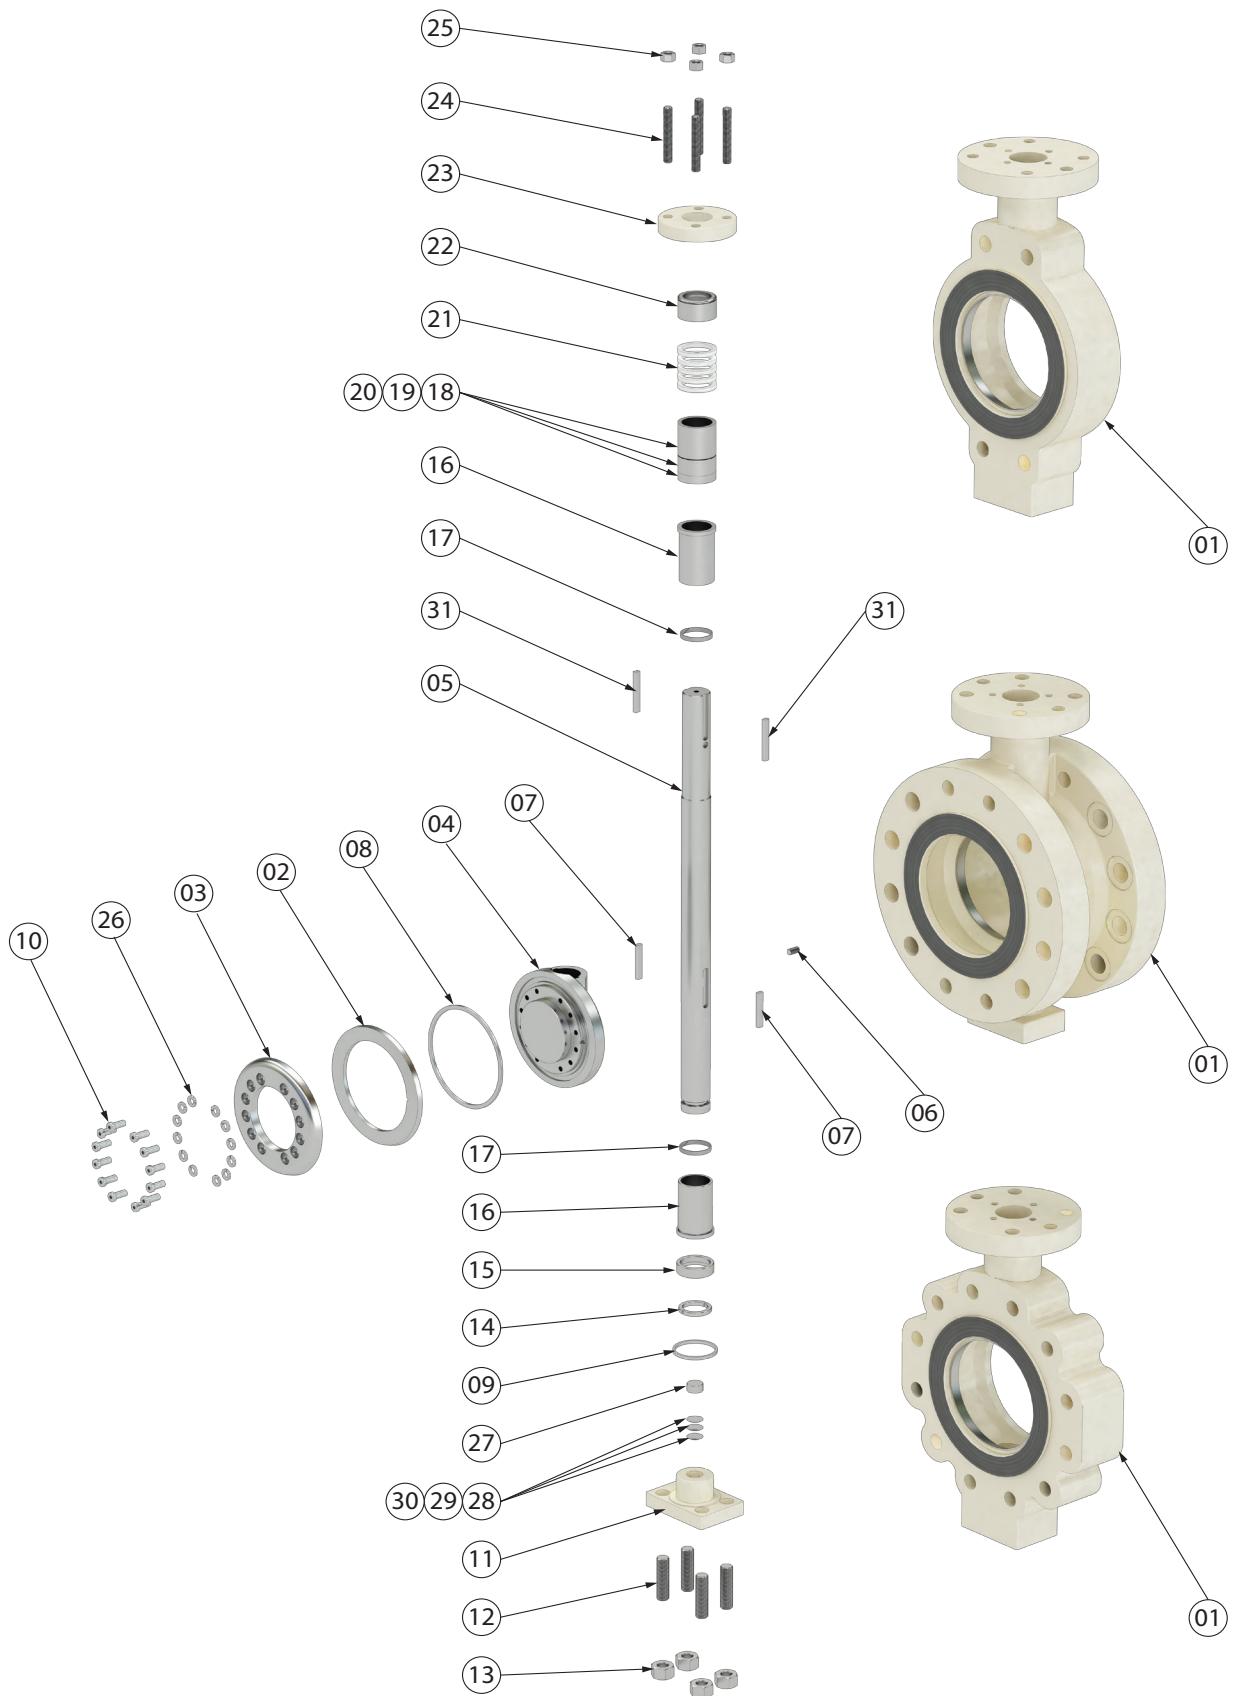

Higher temperature limits can be achieved with stem extensions. Consult factory for details.

Graphite rib packing is limited to 450°C (842°F) in oxidizing service.

Example:

08-TX3-F03-B1412GHN-1N5

Refers to an 8 in. Valtek TX3 triple offset butterfly valve, with short flange, raised face, Class 300, carbon steel (WCB) body, stainless (CF8M) disc, stainless (410) shaft, 316 SS Nitrided bearing, double set Graphite packing, laminated duplex 31803/Graphite seal ring, Alloy 21 overlay seat surface, gear operator, with special materials meeting NACE MR0175 requirements.

Flowserve Corporation
5215 North O'Connor Blvd.
Suite 700
Irving, Texas 75039-5421 USA
Telephone: +1 937 890 5839

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
